- Premium Lead Free Drinking Water Faucet In Either Chrome Or Brushed Nickel
- 2.8 Gallon High Purity Metal Tank With Plastic Lining
- All Components NSF Certified
- 3 Year Warranty (Consumables Not Included)

Filters in Reverse Osmosis drinking water systems need to be changed on a regular basis. The frequency of how often they need to be changed will greatly depend on the quantity of water used as well as the Quality of water going through the filters. If you do not change the filters often enough a system can fail prematurely. It is advised to change the filters at least once a year and the Reverse Osmosis Membrane every 3-5 years or as required.
