

Five Stage and Six Stage PH Enhancing Reverse Osmosis System

Our five stage under the sink Reverse Osmosis drinking water filtration system is installed under your sink to give you never ending purified water. Add a 6th PH enhancing filter for even better tasting alkaline water. This system reduces chlorine, chloramines, Trihalomethanes (THMs), PCBs, mercury and aluminum. It also removes barium, boron, nitrates, arsenic III, uranium, as well as other volatile and toxic chemicals. Can be connected to your refrigerator for water and ice.

SYSTEM BENEFITS

- 5 Micron polypropylene spun filter for silt, dirt, rust, turbidity and iron removal
- 10 Micron carbon block filter to eliminate chlorine, THMs, bad taste & odours
- 5 Micron carbon block filtration to remove volatile and industrial chemicals
- Can be upgraded to a 6 Stage PH Enhancing system
- 50-75 gallons per day capacity
- High Purity thin film composite Reverse Osmosis Membrane removes volatile chemicals, sodium, pesticides etc.
- Inline post polishing filtration for bad taste and odour removal
- Ceramic filter to control bacterial contamination. NSF42 Certified to remove bacteria such as E.coli and Coliform, Cryptosporidium, Giardia, pesticides & more
- Lead free drinking water faucet in chrome or brushed nickel
- 4 Gallon High Purity composite pressure holding tank
- All components NSF certified
- 5 Year Warranty (Consumables Not Included)

Filters in Reverse Osmosis drinking water systems need to be changed on a regular basis. The frequency depends on the quantity of water used and the quality of the water going through the filters. If the filters are not changed often enough the system can fail prematurely. It is advised to change the filters at least once a year and the Reverse Osmosis Membrane every 3-5 years, or as required.
